

Course Description: Construction

Seminole State College of Florida proposes to provide industry-specific education using hands-on approach to expose participants of the Accelerator program with basic skills in the general carpentry and electrical fields.

This project will assist the participants gaining initial skills that can be transferable to entry level jobs in the carpentry and electrical fields. The skills obtained will provide the participants with an edge over those attempting to enter the field with no background or knowledge of the basic skills.

Not only will this program provide the participants with foundational skills and know-how in the general carpentry and electrical fields, they will receive training in CPR/First Aid and OSHA 10 receiving industry credentials in each
